

Senior Consultant – Energy & Sustainability

Position Details

Permanent | Stockholm | Hybrid/remote | Opportunity for leadership role and partnership

Your Impact

As a Senior Consultant in Energy & Sustainability, you will lead strategic work, develop business, and create added value in client projects. You will shape the future of sustainable buildings and infrastructure by influencing how the built environment improves its ESG performance. You will collaborate with property developers, building contractors, property owners, industrial developers, and technology providers to create sustainable properties, energy systems, and data centres.

Your Responsibilities

- Further development of Nordnest's Energy & Sustainability business area and act as a key external player.
- Drive business development, strategic collaborations, and innovation in sustainable solutions.
- Own the development of sustainability work at Nordnest and in client projects, from energy efficiency to environmental certification and ESG reporting.
- Opportunity to lead expert teams in life cycle analyses, energy/climate calculations, environmental certifications, energy audits, and strategy and consulting.
- Build your own project portfolio by utilising Nordnest's existing client network and your own.

What We Are Looking For

- Minimum of 10 years' experience in energy and sustainability work within the construction and property sector.
- Documented experience in environmental certifications (e.g., BREEAM, LEED, WELL), Life Cycle Assessment (LCA), and energy.
- Deep understanding of relevant European and national sustainability laws and regulations.
- Experience in multidisciplinary project environments.

Meritorious Qualifications

- Master's degree in a relevant field (e.g., Civil Engineering, Environmental Science).
- Certifications such as BREEAM Assessor, LEED AP, or similar energy expert qualifications.
- An established professional network within the industry.

Your Working Style

- Entrepreneurial, self-starting, and business-oriented.
- Structured, analytical, and communicative (Swedish/English).

About Nordnest

Nordnest is a systems-thinking company that drives development in properties, energy systems, and digital infrastructure.

We focus on delivering solutions where others see complexity – by combining consulting, internally developed products, and concrete implementation capabilities, we create projects that are smarter, greener, and faster.

With modular platforms such as our EkoNod(TM) concept, we build the sustainable buildings of the future with reduced climate impact and predictable delivery.

Within energy systems, we transform underutilised wind turbines into complete hydrogen and energy storage hubs, creating new value chains and return models.

We add value to the entire property business; from property developers and constructors to residents.

At Nordnest, you work in a team that not only sees the bigger picture – but actively shapes it!
